## **GROUP A STREPTOCOCCAL VACCINES**

## ABSTRACT OF THE DISCLOSURE

The present invention provides immunogenic synthetic fusion polypeptide which stimulates an immune response against a selected pathogen, comprising at least two immunogenic polypetides from a Group A streptococci of at least 10 amino acids in length which are capable of stimulating an immune response against Group A strepococci, and a peptide C terminal to the immunogenic polypeptide which protects the immunogenicity of the immunogenic portion, wherein the C-terminal peptide is not required to stimulate an immune response against Group A streptococci.
